International Paper Well 22 MCC Building

CCS successfully finished another Control Building. This building will provide power and control for a Water Pump for a large irrigation project. Once again the project required multiple disciplines and craft people to complete. The result is an outstanding example of the quality that CCS can provide for our customers.

CCS's scope was to install a Medium Voltage Switchgear, Transformer, and MCC sections.

Thanks again to all our employees that make these projects a success.

Manfred Laner, President
Glenn Miller, Vice President

John Costa, Sales
John Reifsnnyder, Sales
