CCS provides State-of-the-Art Electrical & Mechanical equipment buildings to most of the major industrial Manufacturing plants. CCS fabricates the buildings from ground up and offers an extensive variety of integration options. Some of the integration options include MCC/Switchgear, DCS/PLC Control Cabinets, Analyzer Systems, Environmental monitoring equipment, and many other options.

Due to the fact that CCS has fully equipped shops that can fabricate, wire, and test most industrial power equipment, control systems, and analyzer systems, it is a natural fit to incorporate those systems in the control buildings. This service will offer to the client a complete and "one stop" solution.
