CUSTOM CONTROL SOLUTIONS, INC

1520 Power Blvd, Cantonment, FL 32533

Phone: 850-473-8704

Airgas is constructing a new state of the art Liquid Hydrogen Plant in Calvert City, Kentucky. Not only is this the first Liquid Hydrogen Plant constructed in North America since 1997, it is Airgas' first LH2 plant and their first industrial scale hydrogen plant. The new facility will have the capacity to produce ten tonnes per day of liquid hydrogen for use in a wide range of customer applications, including electrical power generation; the production of metals, glass, chemicals, and food products; and emerging applications for hydrogen-powered fuel cells. The company anticipates the plant will come on-stream in summer 2016. Custom Control Solutions was awarded the fabrication of the Analyzer System Panels for this one of a kind

This project was CCS' first Analyzer Project with Airgas and included a total of 8 cabinets with eleven process gas analyzers and one gas chromatograph. CCS built the system at their Power Blvd. facilities in Pensacola, FL.

CCS has built and fabricated 100's of analyzer systems for multiple Customers over the past 12 years. From panels to analyzer houses, general purpose and hazardous areas, CCS has the experience and ability to design, fabricate, integrate, and test gas analytical systems. CCS designs and constructs their own buildings and shelters as well, making CCS your one stop shop for analyzer and electrical buildings and shelters. Go to our new website for pictures and details of our work.
