CCS designed and constructed a four section Power Electrical Equipment Center. This PEEC will be installed on 10 Ft. high pilings at the plant location. Each section will be lifted in place and attached to each other to make a single 32 Ft. x 90 Ft. building.

The building will house Switchgear to feed MCC sections. CCS is installing the necessary cable tray and cable bus support system. The building also houses DCS control enclosures in another room within the building. Along with all the utilities, i.e. lighting, transformers, receptacles, etc. CCS is also installing the Environmental Control System designed for the final location.

3 Manufacturing Locations

Corporate Office & Integration

1520 Power Blvd
Cantonment, FL 32533

Fabrication & Integration
